

CONFIDENTIAL

FBIS-1119/86
19 May 1986

MEMORANDUM FOR: Chief, Foreign Networks Division
Office of Communications

25X1
FROM:

[REDACTED]
Communications Officer, FBIS

SUBJECT: Telecommunications Service Request

REFERENCE: A. FBIS-1278/85 dtd 15 Nov 1984 (same subject)
B. LL19Nov840002 (same subject)
C. TSO D40556/B050-18 (same subject)

1. The purpose of this memorandum is to request that TSO D40556/B050-18 dated 30 November 1984 be cancelled. Although the path between the United Kingdom and Andrews Tech Control has already been upgraded in response to ref C, FBIS has been unsuccessful in upgrading the Andrews-Key Building segment of HFBDB050 due to software restrictions in the FBIS computer.

2. We still are interested in upgrading the HFBDB050 circuit to at least 150-baud but unfortunately it must be delayed until FBIS Headquarters relocates to Reston early in CY 87. A new Telecommunications Service Request (TSR) will be submitted by FBIS in the near future outlining our requirements and including a new equipment configuration and terminal location.

3. It is requested that DCA be instructed to cancel TSO D40556/B050-18 with the proviso that link changes already accomplished remain intact and that circuit HFBDB050 continue in operation at 74.2 baud for the time being.
